"MAGE-1 gene product is a cytoplasmic protein.";

Int. J. Cancer 59:452-439(1994).

-I- FUNCTION: Not known, though may play a role in embryonal development and tumor transformation or aspects of tumor progression. Antigen recognized on a melanoma by autologous cytolytic T lymphocytes.

-I- SUBCELLULAR LOCATION: Cytoplasmic.

-I- SUBCELLULAR LOCAT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      J. Bacteriol. 185:2330-2337(2003).
-!- FUNCTION: The recF protein is involved in DNA metabolism; it is required for DNA replication and normal SOS inducibility. RecF binds preferentially to single-stranded, linear DNA. It also seems to bind ATP (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
-!- SIMILARITY: Belongs to the recF family.

"Cyclin destruction in mitosis: a crucial task of Cdc20.";

PEBS Lett. 532:7-11(2002).

-!- FUNCTION: Activator protein, which is required for proteolytic destruction of cyclins during mitosis. Acts via its interaction with the ubiquitin ligase APC/C complex. Plays an essential role in mitosis exit by directing degradation of CLB2 cyclin. Also required for two microtubule-dependent processes, nuclear movements prior to anaphase and chromosome separation. CDC20 may modulate microtubule structure either by promocing microtubule disassembly or by altering the surface of the microtubules.

-!- SIMILARITY: Contains 7 WD repeats.

-!- CAUTION: Ref.1 sequence differs from that shown due to a frameshift in position 502.

Arch. Virol. 144:1601-1609(1999).
-!- FUNCTION: Initiates transcription by a unique cap-stealing mechanism that involves the cleavage of only the m(7)GpppAm structure from cellular hnRNAs.
-!- CATALYTIC ACTIVITY: N nucleoside triphosphate = N diphosphate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     STRAIN=Rd / KW20 / ATCC 51907;

                                                                  -I- FUNCTION: DNA gyrase negatively supercoils closed circular double-stranded DNA in an ATP-dependent manner and also catalyzes the interconversion of other topological isomers of double-stranded DNA rings, including catenanes and knotted rings.
-I- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
-I- SUBUNIT: Made up of two chains. The A chain is responsible for DNA breakage and rejoining; the B chain catalyzes ATP hydrolysis. The

Interacts with the secY/secE subunits. SecA has a central role in coupling the hydrolysis of ATP to the transfer of pre-secretory periplasmic and outer membrane proteins across the membrane (By similarity).
